

ABHISHEK RAJPUT

Full Stack Developer

SUMMARY

Frontend / full-stack developer with 4.5 years of experience building responsive, high-performance web applications using React, Next.js and TypeScript. Skilled in developing API-driven frontends over GraphQL and REST, reusable component libraries, and MERN-stack applications. Comfortable owning features end to end — component architecture, state management, API integration and performance tuning — and debugging tricky UI and data-flow issues across the stack

EDUCATION

B.Sc. in Computer Science

Agra University, Agra

SKILLS

- HTML
- CSS
- Tailwind CSS
- Javascript
- Typescript
- React.js
- Next.js
- Node.js
- Express
- MongoDB
- jahia (basic)

LANGUAGE

- Hindi
- English

EXPERIENCE

Haldiram's India – Shopify Headless Storefront

React, Next.js, TypeScript, Redux, Tailwind CSS

- Architected a headless storefront using Next.js, TypeScript, and Shopify Storefront API (GraphQL) — homepage, PLP, PDP, and cart, end-to-end.
- Built the PLP with dynamic filtering, sorting, and a variant-aware price range slider, and managed cart/checkout state via Redux with consistent tax and line-item totals.
- Integrated custom authentication and newsletter flows using Shopify Admin API and Metaobjects.
- Built reusable, responsive UI components (modals, drawers) with Tailwind CSS, optimized for mobile and performance.

Aditya Birla Capital – CMS-Based Platform

Next.js, TypeScript, Strapi, GraphQL, Tailwind CSS

- Frontend development of a CMS-based platform serving 50K+ users, from architecture to delivery, while mentoring a team of junior developers.
- Built scalable, reusable modules with Next.js, Strapi, GraphQL, and Tailwind CSS, with a maintainable component architecture.
- Translated Strapi-driven content models into dynamic, editable UI sections alongside content and design teams.
- Optimized page-load performance and SEO via SSR and static generation in Next.js.

Employee Management System (EMS)

React, TypeScript, Tailwind CSS

- Built UI components for an internal EMS covering timesheet entry, task tracking, and approval workflows.
- Integrated REST APIs for data fetching and form submissions with client-side validation and error handling.
- Delivered responsive, accessible, performance-optimized layouts using React and Tailwind CSS, including data-heavy views like timesheet tables and dashboards.

Medica – Insurance Platform

React, TypeScript, Jahia CMS, Tailwind CSS

- Developed frontend UI for an insurance platform built on Jahia CMS, creating reusable React components integrated with Jahia's module system and design tokens.
- Built a sign-in dropdown and drawer component system with cross-island state communication via a browser event bus, using CSS-toggled visibility for Island compatibility.
- Delivered responsive, token-based styling with Tailwind CSS, translating design specs into consistent, maintainable UI across the platform.
